Ashirvad Bhushan

Software Engineer — Backend & Infrastructure

ashirvadbhushan@gmail.com · Kolkata, India · asrvd.dev · github.com/asrvd · linkedin.com/in/asrvd · x.com/_asheeshh

Backend engineer who owns systems end to end, from API design to the servers they run on. Scaled a consumer app to 100K+ concurrent users at launch, shipped Chrome extension features used by 300K+ people, and maintained create-t3-app.

EXPERIENCE

Imagined (acquired by WLDD) — Software Development Engineer — Remote · Jan 2026 – Present

Tatva — consumer app (Node.js, Express, MongoDB, Redis, BullMQ)

- Owned the backend architecture and admin dashboard end to end, from data model to production.
- Scaled backend and infrastructure to handle 100K+ concurrent users at launch, using PM2 clustering and nginx load balancing across several DigitalOcean servers on a private network.
- Cut p95 API latency from 100ms+ to under 5ms through load testing and MongoDB connection-pool tuning.
- Built a Python media microservice (FastAPI, Pillow, FFmpeg) that auto-generates branded images and videos for every post, including text overlays, share cards and push-notification thumbnails, served through a DigitalOcean Spaces CDN.
- Set up centralised logging and monitoring with Grafana, Loki and pino; built LogQL dashboards filterable by deployment.
- Ran production operations: log rotation, SSL and nginx fixes, firewall rules, and FCM push notifications on iOS and Android.

GoReach — fintech / wealth management (Java, Spring Boot, PostgreSQL, AWS)

- Integrated Setu, smallcase and other financial APIs into the core product.
- Built the staging environment and deployment pipeline on AWS ECS Fargate.
- Shipped a Wealth Score engine, a WebSocket-based AI chatbot, Google Calendar appointment booking and onboarding flows.

Client work

- Built the website and dashboard for The Offline Network with Next.js and Tailwind CSS.
- Building an invite-only waitlist with referral codes for Protocol32's Shopify store (TypeScript, Express, MongoDB).

TravelArrow — Software Engineer (Contract) — Remote · Jan 2024 – Sep 2026

- Built core features and UI for a travel Chrome extension used by 300K+ users.
- Designed remotely hosted iframe popups, letting the team ship UI changes without an extension release.
- Prototyped a RateHawk hotel-rate integration.
- Built roomunlocker.com, which compares hotel deals across all major booking sites in one search.

GroVr — SDE Intern — Remote · Sep 2023 – Nov 2023

- Built the full-stack MVP end to end with Next.js, Tailwind CSS and Node.js.

OPEN SOURCE & PROJECTS

- **create-t3-app** — Maintainer of the widely used CLI for scaffolding full-stack, typesafe Next.js apps.
- **Catppuccin** — Maintained several ports of the popular open-source pastel colour theme.
- **Supathreads** — AI tool that turns long-form blog posts into Twitter threads. Winner, Best Use of AI, Supabase Launch Week 7 Hackathon (2023).
- **Munchwise** — AI calorie tracker. Winner, Most Visually Pleasing, Supabase Launch Week 13 Hackathon.

ACHIEVEMENTS

- Winner, Arweave Hacker House, Bangalore (2025).
- Two-time Supabase hackathon winner (Supathreads, Munchwise).

SIDE QUESTS

- Technical writer on DEV: 31 articles, 200K+ views and 4.4K+ followers.
- Grew a personal YouTube channel to 2K+ subscribers and got it monetised.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL
Backend: Node.js, Express, Spring Boot, FastAPI, REST APIs, WebSockets, BullMQ
Databases: MongoDB, PostgreSQL, Redis, Snowflake
Infra & DevOps: AWS (ECS Fargate), DigitalOcean, Docker, nginx, PM2, Linux, Grafana, Loki
Frontend: React, Next.js, Tailwind CSS, Chrome extensions

EDUCATION

Kalyani Government Engineering College — B.Tech, Information Technology · 7.61 CGPA — 2022 – 2026
